

**Notice Concerning the Discontinuation of the
Model 80 Stereo Analog Audio Distribution Amplifier
and Alternate Product Options**

The Model 80 Analog Audio Distribution Amplifier was discontinued in January 2001 by Studio Technologies due to a critical component becoming unavailable. The Model 80's ¼-inch input and output jacks, manufactured by Neutric, were discontinued. No substitute is presently available from Neutric or any other manufacturer.

The Models 81 and 82 offer excellent alternatives to the Model 80. Overall, the Models 81 and 82 are very similar to the Model 80, but with several significant differences. The Model 80 had eight stereo outputs that used ¼-inch 3-conductor jacks. The Model 81 has eight stereo outputs that use two 25-pin D-subminiature connectors. The Model 82 has four stereo outputs that use eight 3-pin XLR-type connectors.
