

STATEMENT ON CONFLICT MINERALS

The following text is in regards to the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010

The Dodd-Frank Act, Section 1502(e) (4) is a United States of America (US) regulation which establishes obligations for US stock-listed companies to disclose information about their use of tin, tantalum, tungsten, and gold (“3TG”) that originate from the Democratic Republic of Congo (DRC) and adjacent countries. The aim of this regulation is to call for international action on ending the conflict minerals trade in DRC which fuels armed conflict in the region.

According to this regulation, all companies reporting to the US Securities and Exchange Commission (SEC) are required to conduct due diligence on the use of conflict minerals in their supply chain and to make annual disclosures to the SEC. Studio Technologies, Inc. is privately held firm and does not report to the SEC. As such, filing of the form SD (conflict minerals) is not required and is not performed.

Studio Technologies, Inc. approaches conflict minerals as follows:

Studio Technologies, Inc. is committed to the health and safety of people and the environment worldwide. Moreover, Studio Technologies, Inc. encourages commitment to this goal from its suppliers by implementing a Suppliers Code of Conduct which involves their compliance with all international and local regulations as related to environmental and working practices.

Although Studio Technologies, Inc. is not a stock listed company on any public exchange, we are committed to addressing the use of conflict materials in all of our products. Studio Technologies, Inc. is committed to the cessation of human rights violations in the mining of conflict minerals in restricted countries. We are also committed to increasing supply chain transparency by encouraging our vendors, and their vendors, to trace the source of minerals used in components manufactured in their supply chain. We ask that our suppliers implement procedures to ensure conflict minerals do not enter the products that they supply. We recognize the challenge that this represents due to the difficulties our suppliers may face when attempting to fully trace and understand the origin of the minerals used in their processes and products. However, by stating our goals we feel that we will promote responsible sourcing of all of our materials.
