

STATEMENT ON EU REACH COMPLIANCE

REACH Regulation (EC) 1907/2006 on the Registration, Evaluation, Authorization and Restriction of Chemicals is designed to protect human health and the environment from risks that can be posed by chemical substances, in any material or at any point in its lifecycle. The Regulation directly controls the manufacture and/or use of substances where very significant risks are found to exist, either in specific applications, or as a result of high levels of use across a range of industries and geographical locations. Although primarily seen as impacting the chemical industry, this legislation has implications for all materials and so impacts equipment manufacturing industries.

All Studio Technologies, Inc. products comply with the requirements of EU REACH and do not contain REACH Candidate List Substances (typically referred to as SVHC Candidate Substances) above the Regulation's threshold levels. In support of our commitment, we carefully select suppliers and associated supply chains to ensure compliance with this and other relevant legislation. Studio Technologies, Inc. is fully committed to ethical, sustainable business practices; we comply with and strive to exceed the requirements of any legislation aligned to and supporting them.

Under REACH, Studio Technologies, Inc. products are complex articles which are not designed for intentional substance release. Revision control documents that are an integral part of the product manufacture process are intended to prevent the inclusion of new materials containing Candidate List substances.
